

250 AMP, 12 VOLT DC, DIESEL GENERATOR

Built for marine application, this generator will provide 14.1 volts at 250 amp output. This is a prototype unit is powered by a Farymann 18W diesel engine. The alternator is a Delco-Remy 40SI with internal voltage regulator. Direct water cooled with remote panel and 22' extension harness. Automatic shutdown, hand start, water injected exhaust, and vibration mounts.

This unit was built to test the capability of the alternator at variable loads. Engine operates at fixed speed of 3600 RPM. An extra large fan and vents have been added to the alternator's cooling system.
